SAFETY AT WORK

The reliable partner of industry

KNAACK & JAHN is a company that operates in Germany and internationally with key competencies in pipe, plant and apparatus building as well as in air-conditioning and ventilation technology. For KJ FireOff systems, new and unique firefighting nozzles have been specially developed for shipbuilding.

We operate in the most diverse sectors of industry, shipbuilding and building services and are thus able to optimally network our expertise. Our customers thus benefit from particular marketability and flexibility. Decades of experience, high innovative strength and a considerable range of products are additional assets that characterize KNAACK & JAHN.

We consider safety at work and environmental protection to be a constant obligation towards our customers and as an essential prerequisite for our economic success. Our obligation is to offer products and services that satisfy every aspect of customer requirements and ensure maximum safety for man, materials and the environment. This duty is faced by every single employee in our company during their daily work.

All activities to ensure safety at work, fire, health and environmental protection are constantly optimized. This is because safety is not a vested right but a challenge that we must consistently handle. Deviations and weak points, such as those that can arise in every company, are not swept under the carpet by us but are clearly communicated and actively used as a means for improvement.

You can't be too careful

In all business processes, from the strategic management to the specific handling of orders, regular inspections take place as part of our safety procedures. The results are detailed in management reviews and audits.

In addition,

- KNAACK & JAHN GmbH
- Knaack & Jahn Schiffbau GmbH
- KNAACK & JAHN Anlagenbau GmbH

voluntarily subject themselves to SCC certification (safety checklist contractors), an international standard for a safety, health and environmental protection management system.

According to the SCC** standard since 1999

The SCC** certificate of TÜV Nord certifies the reliable and safety aware activity on behalf of our customers. All preconditions for certification are fulfilled:

- Scheduled auditing of the safety, health and environmental protection management system (SHE) annually by TÜV Nord and at least once monthly internally
- Determining the accident figures and comparison with the specified limits for a certification
- Standardized training of the staff and executives on the basis of specified training content, training times and test criteria

For more and more companies, this certificate is the objective decision-making criteria when placing an order. It offers trading partners legal certainty, ensures optimized management processes and efficient work flows. You can rely on this at KNAACK & JAHN. Today and in the future.
